Thanks Janette, reviewing this and that the email from last week for context in planning.

Talk more Friday,

Tasya

Subject: additional thoughts re: plan for former Rhone-Poulenc

Hi Tasya. I sent you some information on Friday about a few specific well sampling suggestions based on a couple of past investigations. After I sent that email I realized that we seem to be pinpointing specific wells and maybe losing sight of the bigger picture. So I'd like to share some reminders of EPA's expectations regarding the additional work so we can discuss them and you can plan accordingly. You probably already are considering these items but because the focus in our discussions lately have been more on the pilot project and looking at specific areas, and less on understanding the overall current conditions, it seems worth it for me to organize my thoughts and make sure I'm clear.

- One reminder is that you may need to update the QAPP to make sure it accurately reflects the work/analyses that will be done. It should also include a comparison of analytical limits to the PRGs.
- Another reminder is that some wells may need to be redeveloped in order to obtain representative samples.
- Third, I want to make sure we are considering what may need to be done to get a comprehensive picture of the current conditions, which may mean more analyses on a more widespread basis than what I think I've been hearing on our calls. This is something we will evaluate when we have a technical meeting and then when you send the draft plan.
- Finally, related to that previous reminder, this all started with updated PRGs and needing to update the list of COCs and current conditions. I don't recall you saying so but I assume you will be submitting a summary of results of the pilot project. I'm also expecting that you will produce a technical memo or short report of current conditions which includes the updated list of COCs.

I'm happy to talk through this when we meet on Friday.

-Janette
